

GPON OLT 2.5/1.25Gbps Class B+ Tx1490/Rx1310nm DDMI

SLGP-2143-B

Overview

The SLGP-2143-B transceiver is the high performance module for single fiber by using 1490nm continuous-mode transmitter and 1310nm burst-mode receiver. It is optical line terminal (OLT) for ITU-T G984.2.

The optical transceiver is compliant with the Small Form-Factor Pluggable (SFP) Multi-Source Agreement (MSA). The transmitter section uses a 1490nm DFB LD with automatic power control (APC) function and temperature compensation circuitry to ensure stable extinction ratio over all operating temperature range, and is Class I laser compliant IEC825 and CDRH standard. The receiver has a hermetically packaged burst-mode APD-TIA (trans-impedance amplifier) pre-amplifier and a burst-mode limiting amplifier with LVPECL compatible differential outputs.

Ordering Information

Part Number	Product Description
SLGP-2143-B	GPON OLT 2.5G/1.25Gbps Tx1490/Rx1310nm DDMI Class B+ 0°C ~ +70°C

Features

- ◆ 1490nm continuous-mode transmitter with DFB laser
- ◆ 1310nm burst-mode receiver with APD-TIA
- ◆ Single 3.3V power supply
- ◆ Reset burst-mode receiver design
- ◆ Burst mode signal detect output which is LVTTTL compatible.
- ◆ Burst mode received signal strength indication output
- ◆ 20Km Reach 28dB link budget
- ◆ Complies with ITU-T G984.2 Class B+
- ◆ Digital diagnostic interface compliant with SFF-8472
- ◆ Complies with RoHS directive (2002/95/EC)
- ◆ Operating case temperature: Standard : 0 to +70°C

Applications

- ◆ Gigabit Passive Optical Networks (G-PON) – OLT side

Notes:

1. The optical power is launched into SMF.
2. PECL input, internally AC-coupled and terminated.
3. Measured with a PRBS $2^{23}-1$ test pattern @1250Mbps, BER $\leq 1 \times 10^{-10}$.
4. Internally DC-coupled.
5. RSSI DDM working range is between -8 to -28 dBm. RSSI DDM accuracy is better than +/- 3dB for input power levels between -12 to -28 dBm, the accuracy reduces to +/- 5 dBm for other input power levels.

Digital Diagnostic Memory Map

The transceivers provide serial ID memory contents and diagnostic information about the present operating conditions by the 2-wire serial interface (SCL, SDA).

The diagnostic information with internal calibration or external calibration all are implemented, including received power monitoring, transmitted power monitoring, bias current monitoring, supply voltage monitoring and temperature monitoring.

The digital diagnostic memory map specific data field defines as following.

Notes:

- TX Fault is an open collector output, which should be pulled up with a 4.7k~10kΩ resistor on the host board to a voltage between 2.0V and V_{cc}+0.3V. Logic 0 indicates normal operation; Logic 1 indicates a laser fault of some kind. In the low state, the output will be pulled to less than 0.8V.
- TX Disable is an input that is used to shut down the transmitter optical output. It is pulled up within the module with a 4.7k~10kΩ resistor. It's states are:
 - Low (0 to 0.8V) : Transmitter on
 - (>0.8V, < 2.0V) : Undefined
 - High (2.0 to 3.465V) : Transmitter Disabled
 - Open : Transmitter Disabled
- Mod-Def 0,1,2. These are the module definition pins. They should be pulled up with a 4.7k~10kΩ resistor on the host board. The pull-up voltage shall be V_{ccT} or V_{ccR}.
 - Mod-Def 0 is grounded by the module to indicate that the module is present
 - Mod-Def 1 is the clock line of two wire serial interface for serial ID
 - Mod-Def 2 is the data line of two wire serial interface for serial ID
- RESET is a LVTTTL input. When the previous burst signal package is end, the host will give a "high" RESET to restore the state of LA. Internal pull-down 10K resistor to GND.
- BSD can track the state of receiving burst signal. Logic 0 indicates loss of signal; Logic1 indicates receiving signal packages.
- RSSI TRIG is a CMOS input. Assert high after 30ns delay time of the beginning of the monitored burst package, at least 300ns in duration.
- RD-/+ : These are the differential receiver outputs. They are internally DC-coupled 100 differential lines which should be terminated with 100Ω (differential) at the user SERDES.
- TD-/+ : These are the differential transmitter inputs. They are internally AC-coupled, differential lines with 100Ω differential termination inside the module.
